Montebello, CA | +1 323-434-3838 | kdnakashimo719@gmail.com | [linkedin.com/in/kd-nakashimo](https://www.linkedin.com/in/kd-nakashimo)

Professional Summary

Software Engineer with experience building user-facing applications, internal tools, and data visualization workflows that make complex information easier to understand and use. Background includes frontend development, API integration, delivering production software, and geospatial mapping tools across commercial products and specialized data-driven applications. Brings a problem-solving mindset, strong visual reasoning, and a focus on maintainable systems, practical UX, and cross-functional collaboration.

Key Skills

Languages: Python, JavaScript, SQL, C++, C#, Java, Visual Basic

Frontend & UI: React, HTML, CSS, Qt, Cesium, Three.js

Data & Tools: PostgreSQL, JSON, AWS, GitHub, Linux

Software Practices: Frontend Development, Web Applications, API Integration, Plugin Development, Data Visualization, Technical Communication

Geospatial Track Record: QGIS, GeoJSON, LiDAR, LAS, HD Maps, OpenStreetMap

Work Experience

Software Engineer

Dynamic Map Platform Co., Ltd. | Shibuya, Tokyo, Japan

Oct 2023 – Mar 2026

3Dmapspocket®

Browser-based 3D visualization tool for inspecting and measuring HD map road vectors and nationwide LiDAR survey data, supporting both internal workflows and customer use cases.

- Integrated new API endpoints and cookie-based authentication to align the viewer with backend restructuring and enable scalable access to terabyte-scale LiDAR point cloud datasets.
- Implemented a 500-meter point cloud box extraction workflow and updated viewer behavior to reduce unnecessary data transfer, improving loading speed and responsiveness.
- Redesigned UI components with updated branding and added Japanese localization, improving usability and onboarding for the commercial release.
- Prototyped future product capabilities, including a virtual drive-through experience for LiDAR datasets and seamless switching between point cloud and photorealistic 3D map views.

Map Linker Plugin

QGIS plugin that links 2D to 3D road feature datasets, streamlining verification and publishing workflows for an autonomous driving mapping initiative commissioned by Japan's New Energy and Industrial Technology Development Organization (NEDO).

- Implemented the plugin's frontend in Qt and Python based on design specifications, building a multi-tab interface for map loading, data linking, verification, and publishing operations.
- Collaborated in a waterfall development environment to define requirements, estimate effort, divide implementation tasks, and deliver the project on schedule.

Internal Mapping Automation Tool

Microsoft Excel macro tool for automating shapefile generation processes.

- Built a Visual Basic-based frontend and automated shapefile generation tasks previously performed through manual input processes.

Corporate Hackathon & Beta Testing

Supported a company-sponsored hackathon that doubled as beta testing for the commercial release of 3Dmapspocket®.

- Delivered a technical workshop, supported software distribution for 20+ participants, and facilitated live user testing with multiple users.

Career Break

Apr 2026 – Present

Taking a planned career transition period to explore opportunities in other industries, support an early-stage venture, and prepare for relocation.

Education

B.S. in Computer Science | University of Utah | 2023

Relevant Coursework: Artificial Intelligence, Computer Security, Computer Networks, Computer Graphics, Database Systems

Languages

English (Native), Japanese (Professional Proficiency)

Authorized to work in the United States and Japan
